

The Structure of the Expanded State
of Tomato Bushy Stunt Virus

A thesis presented

by

Ian Keith Robinson

to

The Committee for Higher Degrees
in Biophysics

in partial fulfillment of the requirements
for the degree of
Doctor of Philosophy
in the subject of

Biophysics

Harvard University
Cambridge, Massachusetts

July 1981

ACKNOWLEDGEMENT

I would like to thank my advisor, Stephen Harrison, for his persistent encouragement throughout this project, and for providing a stimulating environment in which to work. I would also like to thank Pamela Bjorkman, Jim Hogle, Rich Honzatko, Tommy Kirchhausen, Paul Kuttner, Bob and Jane Ladner, Mitch Lewis, Art Olson, Doug Rees, Craig Steele, Peter Stockley, Judy White, Don Wiley and Ian Wilson for a great deal of assistance throughout the last four years. Special thanks are due to Jim Hogle whose help has been invaluable in the data collection and computational stages. Thanks are also due to Ivan Rayment, Micheal Rossmann and Gerard Bricogne for helpful discussions.

The expanded (top) and compact (bottom) states of Tomato Bushy Stunt Virus (Courtesy of A. J. Olson).

TABLE OF CONTENTS

Chapter 1. Introduction	6
1.1 Structure of TBSV	10
1.1.1 General architecture	10
1.1.2 Electron microscopy	14
1.1.3 Solution scattering	14
1.1.4 Crystallographic study	15
1.1.5 Related virus structures	21
1.2 Virus expansion	22
1.2.1 Expansion of BMV	22
1.2.2 Expansion of TBSV	25
1.3 Virus assembly	28
1.3.1 Assembly of BMV and CCMV	28
1.3.2 Assembly of TCV and TBSV	29
1.3.3 Size determination	31
Chapter 2. Crystals	33
2.1 Crystal growth conditions	33
2.1.1 Choice of crystallisation method	35
2.1.2 Determination of conditions (theory)	37
2.1.3 Determination of conditions (practice)	39
2.1.4 Crystal diffraction	44
2.2 Space group	45
2.3 Packing analysis	52
2.3.1 Particle orientation	52
2.3.2 Particle contacts	54
2.4 Heavy atom derivatives	55
Chapter 3. Data collection and processing	59
3.1 Choice of data collection method	59
3.1.1 Oscillation range	61
3.1.2 Oscillation strategy	63
3.2 Data collection procedure	66
3.3 Film scanning	73

3.3.1	Crystal polarity	73
3.3.2	Masks and wedge	75
3.3.3	Scanning procedure	77
3.4	Data processing	79
3.4.1	Individual resolution cutoffs	82
3.4.2	Estimation of rocking curve width	83
3.4.3	Data processing results	83
3.4.4	Selection of films for final merge	85
Chapter 4.	Expansion models	91
4.1	Model description	92
4.1.1	Description of the contacts between domains	93
4.1.2	Simplified starting model	99
4.1.3	Proposed strategy for obtaining phases	102
4.2	Calculation of structure factors	103
4.2.1	The aliasing problem and its solution	105
4.2.2	Application to map generation	110
4.2.3	Gaussian filter method	111
4.2.4	Atomic coordinates	114
4.2.5	Organisation of programs	115
4.2.6	Core sort	117
4.2.7	Tests with compact TBSV	118
4.3	R-factor searches	121
4.3.1	R-factor searches for expanded TBSV	122
4.3.2	Extension to a 3-parameter model	124
Chapter 5.	Symmetry averaging refinement	128
5.1	Introduction	128
5.1.1	Theoretical background	128
5.1.2	The refinement of phases	133
5.2	Computational application	135
5.3	Application to expanded TBSV	139
5.3.1	Space groups and grid sizes	141
5.3.2	Choice of parameters for AVERAGE	143
5.3.3	Choice of parameters for EXPAND	150
5.3.4	Phase combination	155
5.4	Envelope considerations	156
5.5	Computational details	161

Chapter 6. Refinement results	167
6.1 Low resolution refinement	167
6.2 Heavy atom derivative interpretation	173
6.2.1 Difference Fourier method	174
6.2.2 Heavy atom difference maps	175
6.3 Heavy atom refinement	178
6.3.1 Platinum sites	180
6.3.2 Mercury sites	182
6.3.3 Interpretation of the heavy atom positions	184
6.4 Improved model	187
6.4.1 9-parameter model specification	188
6.4.2 R-factor searches	189
6.5 High resolution phase refinement	191
6.6 High resolution heavy atom refinement	193
6.7 Final optimisation of the model	200
6.8 Calculation of final map	207
Chapter 7. Conclusions	213
7.1 Interpretation of the maps	213
7.1.1 Beta annulus	214
7.1.2 The extended arm	217
7.1.3 S-domains	224
7.1.4 The hinge	227
7.1.5 P-domains	228
7.1.6 S-P contacts	229
7.1.7 S-S contacts	231
7.1.8 The viral interior	233
7.2 Discussion	234
7.2.1 Expansion mechanism	235
7.2.2 Hysteresis	236
7.2.3 Quenching	240
7.2.4 Assembly	241
Appendix A. R-factor for uncorrelated F's	244
Bibliography	247
